

Geoff Perrin

Brooklyn, NY • geoffperrin@gmail.com • [linkedin.com/in/geoff-perrin](https://www.linkedin.com/in/geoff-perrin)

Forward-deployed applied data scientist, 8 years building and shipping models in consequential, physical-world domains - energy, utilities, infrastructure, government, fintech. Technical core in causal inference and risk modeling (uplift, quasi-experimental design, underwriting); differentiator is field credibility - embedding with utility field teams, city departments, and risk owners to win operator trust and drive real-world adoption. Bilingual EN/ES with direct delivery experience across US, Canada, Mexico, and LatAm.

EXPERIENCE

Nelo — Senior Data Scientist

07/2024 – 10/2025

Mexican BNPL / consumer-credit fintech

New York, NY / CDMX, MX

- Owned the credit-limit model setting how much credit each consumer could be extended without tipping into default - a two-stage model (classifier stacked on regression), partnering directly with the head of risk to encode credit-domain logic into features.
- Owned a secondary, per-loan underwriting model classifying whether a loan would be repaid vs. fall 30+ days past due; cut inference latency ~10x by trimming SQL and features, unlocking real-time scoring on credit-card transactions, a fast-growing product segment.
- Built an X-Learner uplift model measuring the long-term (3–6 month) profit impact of gating new loans - requiring repayment of outstanding balances - for users the secondary underwriting model flagged as likely to default; validated against a randomized holdout P&L - **\$1.2M+ in annualized loss mitigation**.
- Stood up experimentation practice (power analysis, guardrail metrics) to measure repayment and retention levers feeding underwriting and product decisions.

Urbint — Senior Data Scientist

03/2020 – 07/2024

AI risk platform for North American gas & electric utilities

New York, NY

- Forward-deployed across major utilities (National Grid, Southern Company, Enbridge, Xcel, + More) - embedded with client field teams to build, explain, and drive adoption of GIS-based risk models into operational workflows.
- Converted a tense onsite review with a major utility's field engineers into buy-in by walking them through model internals in person - why specific excavators scored high-risk - turning skeptics into champions (one client SME later joined Urbint to own the relationship).
- Built the GIS "impact" model scoring the community consequence of asset damage (proximity to hospitals, schools, dense areas); paired with the likelihood model, it became a centerpiece product tied to significant ARR.
- Drove **\$5M in renewal ARR** and a **\$1M new-logo deal** through field-facing analytics, model R&D, and client-success work in risk-averse utility environments.
- Shipped production ML and built ETL/MLOps pipelines that cut model-build and analysis turnaround up to 90%.

City of Detroit & Guadalajara — Data Scientist (Consulting)

08/2017 – Present

Ongoing municipal data-science delivery alongside full-time roles

NY / Detroit / Guadalajara

- Built an ML occupancy model for the City of Detroit to target the foreclosure crisis across 100k city-controlled parcels - **valued at \$8.5M+ in public benefit**, championed by Mayor Mike Duggan; sourced data across city departments and shipped predictions into the city CRM.
- Built and deployed a Next.js/TypeScript executive KPI dashboard for Guadalajara leadership across 26 municipal indicators (delivered in Spanish), and led open-data audits of two municipal transparency platforms.
- Built a Python/Smartsheets dedupe tool (Streamlit) for Detroit's Project Clean Slate expungement program (~5k clients/year); led GIS work supporting \$2M in neighborhood benefit allocation and analysis used in 2022 federal census litigation.

Ford Motor Company — Data Scientist*Ford Smart Mobility*

04/2018 – 03/2020

Detroit, MI

- Embedded with city departments of transportation across Mexico City, Miami, Pittsburgh, and Detroit, delivering mobility data science and accessibility/AV-support tooling through cross-city partnerships.

NYU Center for Urban Science & Progress — Research Assistant

11/2016 – 07/2017

New York, NY

- Built a neural-net model predicting household waste generation for NYC Sanitation, and a random-forest model predicting neighborhood shooting-report propensity for NYPD.

EDUCATION

M.S., Data Science / Urban Informatics — New York University**B.S., Economics, Mathematics, German** — University of Michigan**TECHNICAL SKILLS**

Specialties: Causal inference (uplift, X-Learner, CUPED, quasi-experimental design), risk & underwriting modeling, experimentation / A-B testing, geospatial / GIS analytics, forward-deployed client delivery

Languages: Python, SQL • English, Spanish (fluent)

ML: XGBoost, scikit-learn, PyTorch, transformers, SHAP, geopandas

Infra / Tools: AWS (Athena, S3, EC2), GCP, Airflow, MLflow, Git, QGIS / ArcGIS

SELECTED PROJECT

M.S. Capstone — Measuring Infrastructure Quality via Remote Sensing

Mounted phones on bikes to capture street imagery and accelerometer data, classifying bike-lane quality with computer vision and ML to prioritize repairs. Pitched to faculty and industry judges; 3rd place.

COMMUNITY

RiseBoro Spanish-speaking “Friendly Visitor” Program

I make weekly visits & phone-calls to two older Brooklyn residents - we play harmonica, talk baseball, trade jokes, and I try to win at dominos (2021–present).
